If you have commercial insurance problems in males. Talk to your healthcare provider if this is a concern for you.

Treatment with Siklos and for at least 6 months after treatment. Siklos may cause fertility be pregnant.

Siklos. Tell your healthcare provider right away if you become pregnant or think you may months after treatment with Siklos.

Siklos is safe and effective in children less than 2 years of age.

and reduce the need for blood transfusions in children, 2 years of age and older, with sickle cell anemia with recurrent moderate to severe painful crises. It is not known if Siklos is safe and effective in children less than 2 years of age.

WARNING: LOW BLOOD CELL COUNT and CANCER
• Low blood cell counts are common with Siklos, including low red blood cells, white blood cells, and platelets, and can be severe and life threatening. If your white blood cell count becomes very low, you are at increased risk for infection. Your healthcare provider will check your blood cell counts before and during treatment with Siklos. Your healthcare provider may change your dose or tell you to stop taking Siklos if you have low blood cell counts. Tell your healthcare provider right away if you get any of the following symptoms: fever or chills; shortness of breath; body aches; unusual headache; feeling very tired; bleeding or unexplained bruising.
• Cancer. Some people have developed cancer, such as leukemia and skin cancer, after taking Siklos for a long time. Your healthcare provider will check you for cancer. You should protect your skin from the sun using sunblock, hats, and sun-protective clothing.

MOST IMPORTANT INFORMATION YOU SHOULD KNOW ABOUT SIKLOS
• Siklos can harm your unborn baby.
• For females taking Siklos who can become pregnant:
  - You should talk with your healthcare provider about the risks of Siklos to your unborn baby.
  - You should use effective birth control during treatment with Siklos and for at least 6 months after treatment with Siklos.
  - Your healthcare provider will perform a pregnancy test before you start treatment with Siklos. Tell your healthcare provider right away if you become pregnant or think you may be pregnant.
• For males taking Siklos: Siklos can affect your sperm. If you have a female sexual partner who can become pregnant, you should use effective birth control during treatment with Siklos and for at least 6 months after treatment. Siklos may cause fertility problems in males. Talk to your healthcare provider if this is a concern for you.

WHAT ARE THE POSSIBLE SIDE EFFECTS OF SIKLOS?
(See “What is the most important information I should know about Siklos?”) Siklos may cause serious side effects, including:
• Skin ulcers, including leg ulcers have happened in people who take Siklos. This has happened most often in people who receive interferon therapy or have a history of interferon therapy. Your healthcare provider will decrease your dose or stop treatment with Siklos if you develop any skin ulcers.
• Enlarged red blood cells (macrocytosis). Macrocytosis is common in people who take Siklos and can make it difficult to detect a decrease of folic acid. Your healthcare provider may prescribe a folic acid supplement for you.

WHO SHOULD NOT TAKE SIKLOS?
Do not take Siklos if you are allergic to hydroxyurea or any of the ingredients in Siklos. See the Medication Guide for a list of the ingredients in Siklos.

WHAT SHOULD YOU TELL YOUR HEALTH CARE PROVIDER BEFORE TAKING SIKLOS?
Tell your healthcare provider about all of your medical conditions, including if you have kidney problems or are receiving hemodialysis; have liver problems; have human immunodeficiency virus (HIV) or take HIV medicines, as taking Siklos with certain HIV medicines can cause serious reactions and may lead to death; have increased levels of uric acid in your blood (hyperuricemia); have a history of receiving interferon therapy or are currently receiving interferon therapy; have leg wounds or ulcers; plan to receive any vaccinations —you should not receive live vaccines during treatment with Siklos; are pregnant or plan to become pregnant (see “What is the most important information I should know about Siklos?”), or are breastfeeding or plan to breastfeed. It is not known if Siklos can pass into your breast milk. Do not breastfeed during treatment with Siklos. Tell your healthcare provider about all the medicines you take, including prescription and over-the-counter medicines, vitamins and herbal supplements.

WHAT ARE THE POSSIBLE SIDE EFFECTS OF SIKLOS?
(See “What is the most important information I should know about Siklos?”) Siklos may cause serious side effects, including:
• Skin ulcers, including leg ulcers have happened in people who take Siklos. This has happened most often in people who receive interferon therapy or have a history of interferon therapy. Your healthcare provider will decrease your dose or stop treatment with Siklos if you develop any skin ulcers.
• Enlarged red blood cells (macrocytosis). Macrocytosis is common in people who take Siklos and can make it difficult to detect a decrease of folic acid. Your healthcare provider may prescribe a folic acid supplement for you.

The most common side effects of Siklos include: infections, headache, fever, skin problems (e.g., skin reactions, dry skin, changes in skin and nail color), stomach and intestine (gastrointestinal) problems (e.g. nausea, constipation), decrease in vitamin D, weight gain. These are not all the possible side effects of Siklos. You are encouraged to report negative side effects of prescription drugs to the FDA at www.fda.gov/medwatch or 1-800-FDA-1088.
